

Creating a Conda Environment with Python 3.10 and NumPy 1.24

Instructions

1. The following commands create a new Anaconda environment named `envx` with Python version 3.10, and then install NumPy 1.24.

```
# Create the environment with Python 3.10  
conda create -n envx python=3.10  
  
# Activate the environment  
conda activate envx  
  
# Install NumPy 1.24  
conda install numpy=1.24
```

2. Run `python example.py`. You can download the `example.py` from [here](#).

How do you fix this error
